

## Forward

*Introduction to Tung's Acupuncture* comprises the most comprehensive study of Master Tung's acupuncture points to date. It is most exciting that Dr. Chuan-Min Wang has written this book as he has a deep understanding of patient care using Master Tung's methods. Having come from Taiwan and studying Master Tung's Acupuncture at an early age, he later graduated from National College of Chiropractic in 1999. He is currently both a chiropractic physician and acupuncturist in USA. Dr. Wang studied Master Tung's methods for several years and mastered this technique. Applying these practices successfully to clinical practice, he not only formed a rich basis of theory but also extensive clinical application. He has lectured with the Asian American Acupuncture Association (AAAA) and has taught numerous classes.

Being a fellow lecturer at the AAAA and after attending several lectures, I began to use Master Tung's basis. I am so appreciative that gynecology and reproductive endocrinology. I found Master Tung's methods to be invaluable in my clinic using only a few needles for great effects.

Master Tung is seen to be one of the most important acupuncturists in modern history. His methods became famous for using only a few needles with miraculous results. His

points were often referred to as “magic” because they had instant and long lasting effects. Being so quick in their delivery and effect, it allows the acupuncturist to see numerous patients in a short time. After 39 years since Master Tung’s passing away, his method can be said to have gained popularity worldwide having spread to China, Japan, Korea, Southeast Asia, and America. The spreading of his methodology, however, has been through his disciples lectures and teaching with little literature to follow. This book offers the public a deep study of both the applications and indications of Master Tung’s points as well as offering theoretical basis. I am so appreciative that Dr. Chuan- Min Wang has published this comprehensive book that will enable the tradition of Master Tung to continue and flourish.

As Master Tung would often say to his students when asked questions, “Observe for yourself, then think about it.” I hope that all who read this book can use these techniques carefully in their practice and think deeply.
